PERSONAL SUMMARY

Computer Science graduate with a Minor in Data Science, currently pursuing a master's degree in Computer Science. Experience building academic and internship projects involving backend services, APIs, data processing, debugging, and software testing. Comfortable working with C++, Java, Python, SQL, Git, and Linux command-line tools, and used to reading documentation before making changes to a system.

Hands-on experience from an IT / Software Engineering internship setting up local development environments, troubleshooting build and runtime issues, testing API health endpoints, and verifying backend service behavior.

CORE SKILLS

Programming Languages: C, C++, Java, Python, SQL

Software Engineering: Object-oriented programming, object-oriented analysis and design, data structures, algorithms, debugging, testing, and documentation

Software Testing: Unit testing concepts, regression testing, integration testing, API health checks, and validation of expected system behavior

Operating Systems: Windows 10/11, basic UNIX/Linux command line, environment setup, file system navigation, and process checks

Version Control & Tools: Git, GitHub, Visual Studio Code, Docker, Node.js, FastAPI, Jupyter Notebooks

Technical Communication: Reading technical documentation, writing clear issue notes, explaining progress, and participating in team updates

EDUCATION

University of Massachusetts Lowell

Master of Science in Computer Science

Expected Spring 2028

Lowell, MA

- Relevant Courses: Advanced Computer Science, Software Development, Artificial Intelligence, Data Systems

University of Massachusetts Lowell

Bachelor of Science in Computer Science, Minor in Data Science

September 2020 - August 2024

Lowell, MA

- Relevant Courses: Machine Learning, Data Visualization, Statistical Modeling

WORK EXPERIENCE

Software Engineering Intern

Tihranix, Foxborough, MA

May 2026 – Present

- Worked on forecasting and decision intelligence features using FastAPI, Next.js, TypeScript, and Python.
- Improved the Forecast Builder so previews respond to selected KPIs, forecast models, time horizons, and sensitivity drivers.
- Connected forecast previews with PLDM-driven context and improved source labeling for live preview, static output, and fallback states.
- Added model- and KPI-specific preview logic to update forecast charts, reasoning, accuracy display, and active model state.
- Used Git, GitHub pull requests, Docker, VS Code, and local build validation as part of the team development workflow.

- Design and maintain a fully responsive website for the restaurant using HTML, CSS, and JavaScript, which enhanced the restaurant's online presence.
- Integrate online menu and contact forms, improving customer engagement and facilitating easier customer communication.
- Tools: HTML, CSS, JavaScript.

PROJECTS

Real-Time Multi-Sensor Monitoring and Fault-Tolerant System

Januray 2026

C++, Python, Linux, TCP/IP, CMake, Google Test

- Designing a multithreaded C++ application to process simulated real-time temperature, voltage, position, and motion sensor data over TCP/IP.
- Implementing object-oriented sensor interfaces, thread-safe message queues, fault detection, structured logging, and deterministic system-state transitions.
- Developing a Python-based sensor simulator and fault-injection tool for testing timeouts, malformed messages, abnormal readings, and communication failures.
- Creating unit, integration, regression, and requirement-based tests using Google Test.
- Configuring a Linux build and continuous-integration workflow using CMake, GitHub Actions, static analysis, and runtime diagnostic tools.

Reliable Distributed Command Processing System

April 2026

Java, Python, Linux, TCP/IP, JUnit, Gradle, Docker

- Designing a Java-based distributed system that exchanges structured commands between a control station and a simulated remote unit over TCP/IP.
- Applying object-oriented analysis and design principles through Command, State, Strategy, and Factory design patterns.
- Implementing message validation, acknowledgements, timeouts, retries, duplicate-message detection, sequence-number verification, and audit logging.
- Developing state-dependent command handling to reject invalid operations and maintain deterministic system behavior.
- Creating JUnit unit, integration, and regression tests for message parsing, command execution, invalid state transitions, and network failures.

CERTIFICATIONS

Google IT Support Professional Certificate

Completed: January 2021

- Developed by Google and delivered through Coursera; consists of five courses focused on hands-on IT support training.
- Gained foundational skills in troubleshooting, customer service, networking, operating systems, system administration, and IT security.

UMass Global Data Science Bootcamp

Completed: August 2024

- Comprehensive data science training with a focus on business insights, structured thinking, predictive modeling, and advanced data visualization.
- Gained expertise in using issue trees, value driver trees, A / B testing, and advanced SQL for business analytics.
